

HONDA
The Power of Dreams

Accord

Saloon and Tourer 2010

ADVANCED IN EVERY WAY

How advanced something is depends on how you view it; a key principle Honda's engineers considered when designing the Accord. At first glance, many will see a wider, lower car, while our engineers see improved aerodynamics and stability. This is because every aesthetic advance has a fundamental engineering objective. Take the sleek lines flowing from the headlights to the wheel arches; all part of an aerodynamic design that significantly reduces nose and tail lift to improve the Accord's overall balance. And we didn't stop at the exterior.

Once behind the wheel you'll notice how quiet the cabin is, through a combination of improved aerodynamics working in tandem with high quality sound deadening materials throughout the body structure. It's exactly this balance between looks, performance and technology that makes the Accord a truly advanced driving experience.

THE VALUE OF EXPERIENCE

Experience is a quality Honda engineers and designers bring to every project. We believe that our experience means we have the knowledge of what is needed rather than what is merely desired. This vision has resulted in Honda's philosophy for manufacturing cars that are always more than the sum of their parts.

The Accord incorporates some of our latest engineering developments, from an improved chassis to the powerful

engines and the automated safety features. But at Honda we have always believed that things work best in unison. Individually these technologies are state-of-the-art, but the way they have been put together lets you feel what advanced driving truly is.

SMOOTH? SPORTY?
HOW ABOUT BOTH?

Combining a sporty performance with a smooth drive was a challenge to our engineers. The innovative solution was to move the fuel tank and engine closer to the car's centre of gravity to minimise body roll when cornering. The front double wishbone, multi-link suspension and greater body rigidity means it responds sharper and more accurately to the driver's demands. A damper system helps regulate the type of performance required, from dynamic and sporty to smooth and luxurious.

Vehicle Stability Assist (VSA) is a traction control system that calculates the exact amount of power,

brake-force and tyre grip needed to prevent skidding and give you maximum control at all times. It works together with Electronic Brake-force Distribution (EBD) to ensure that your car always stays exactly where it should be. So no matter how the roads or braking conditions vary, it can compensate for weight transfer without you even lifting a finger. Even when you're towing, you can rely on Trailer Stability Assist (TSA) to sense and reduce vehicle and trailer roll. All in all, the Accord's smooth and responsive drive provides you with a confidence to enjoy your journey.

COLLISION MITIGATION BRAKING SYSTEM (CMBS)

Works in three stages:

1. Warning: A buzzer will sound and the word 'BRAKE' appears on the multi-information display if the distance between you and the vehicle ahead drops below a pre-set level.
2. Precautions: CMBS applies light braking and tightens the driver's seatbelt if the distance between vehicles continues to drop. Buzzer and warning signs are still active.
3. Action: If a collision is unavoidable, strong seatbelt retraction will automatically be applied to provide maximum protection for front seat occupants before applying brakes to reduce impact speed.

THE MORE EYES, THE BETTER

At Honda, for many years we've been developing technology in one of the world's most advanced humanoid robots: ASIMO. Similar to ASIMO's sensor and visual recognition systems, the most advanced sensing technologies can be found in the Accord's Advanced Driver Assist System (ADAS), available on 2.2 i-DTEC and 2.4 i-VTEC EX grades. The Accord applies this technology to minimise driver fatigue and improve safety on long journeys.

Once driving, if the pre-set distance between you and the vehicle ahead reduces, the Collision Mitigation Braking System (CMBS) automatically comes to your assistance. An audible and visual dashboard warning will alert you to any danger and your speed will be reduced to help avoid an impact.

Another measure to keep your driving experience safe and enjoyable is Adaptive Cruise Control (ACC).

By using a radar device in the front grille, ACC automatically slows down your Accord if it senses the car in front is decelerating and will increase speed up to its pre-set cruise control limit if the way is clear. You can also manually adjust the pre-set speed and distance with steering wheel mounted controls.

The innovative Lane Keeping Assist System (LKAS) uses a camera mounted by the rear view mirror to sense line markings on the road. LKAS calculates the amount of steering torque required to help you keep the vehicle on track and is supported by an audible warning if you drift off course.

As with all of Honda's developments, they only operate with your interaction. We've put as many eyes as possible on the road to make your journey safer and more pleasurable.

i-VTEC. AN ENGINE OR A PIECE OF TECHNOLOGY?

Our latest generation of i-VTEC engines are designed to deliver pure driving pleasure – from sheer exhilaration and performance to lower emissions and improved fuel economy.

There are two i-VTEC petrol engines to choose from. The 2.4 litre i-VTEC engine delivers an advanced driving experience with effortless power delivery of 201PS and impressive fuel economy. You can also choose a 2.0 litre i-VTEC engine that delivers an excellent balance between 156PS of power and exceptional fuel efficiency.

Both are available with a 6 speed manual transmission which includes a shift indicator that informs you of the best moment to change gear in order to maximise fuel economy. The 5 speed automatic transmission provides stress-free motoring, with the option of a steering wheel mounted paddle shift function. By selecting the 'S' mode, a sportier drive is engaged and the paddle shift takes over to give you control of changing gear. The introduction of a kick-down feature on the 5 speed automatic transmission also offers the driver an additional burst of speed when required.

i-DTEC. ECONOMY AND POWER WITHOUT COMPROMISE

The i-DTEC is the latest iteration of our ground-breaking diesel engine technology. Its design mirrors our commitment to finding cleaner, purer and more advanced ways of powering our cars.

This 2.2 litre all aluminium engine is cleaner, more refined and quieter than before, yet it still delivers a performance of 150PS and increased torque of 350Nm for a sportier driving experience.

DON'T YOU JUST LOVE BEING IN CONTROL?

The Accord cockpit has been designed to enhance your driving experience. It's the combination of comfort and ergonomic design that allows you to concentrate on what's important – the road.

Positioned on the centre console is a rotating multi-jog dial which allows you to control a series of functions, including climate control, audio and Satellite Navigation. A 6 disc CD player and 10 speaker Premium Audio System combined with the advanced DVD

Satellite Navigation system allows you to receive up to date traffic information.

An innovative voice command feature means you can also verbally ask for directions, using recognised commands. This is due to its ability to identify your specific voice pattern.

The 'talkback' directions ensure you'll always find your route wherever you are and wherever you want to end up. Also, to assist your vision when parking, the rear view camera displays what's behind you through the Satellite Navigation screen.

Look to the LCD Multi-Information Display positioned under the speedometer to be kept up to date with everything that's going on both inside and outside your Accord. The easy to use steering wheel controls allow you to scroll through the different screens displaying information on mileage, outside temperature, distance to your destination and even a reminder of when your next service is due. A Bluetooth® wireless mobile phone interface lets you talk hands free through a series of speakers and microphones fitted throughout the car. Just a few of the thoughtful features designed to make sure you are in complete control.

For information on which grades these and other features are available on, please see specification pages 25-34.

Boots shown are Accord Tourer 2.2 i-DTEC EX

HOW DO YOU ENGINEER SPACE?

The Accord Tourer gives you 406 litres of boot capacity and the reassurance that whatever you are carrying comfortably fits within the generous space. Whilst designing this refined space, our engineers considered the variety of possible needs, for maximum efficiency and ease of use. The rear seats independently fold down, smoothly recline and slide back with one motion. This delivers a flat floor, to give you a wide range of carrying options.

Within this space, you'll find an assortment of features including tie-down hooks to help secure your belongings, a tonneau cover to safely hide the contents of your boot and under floor compartments, giving you both extra storage space and additional security by hiding your valuables. Clever engineering isn't just about power and aerodynamics, it's also about safety, security, comfort and space.

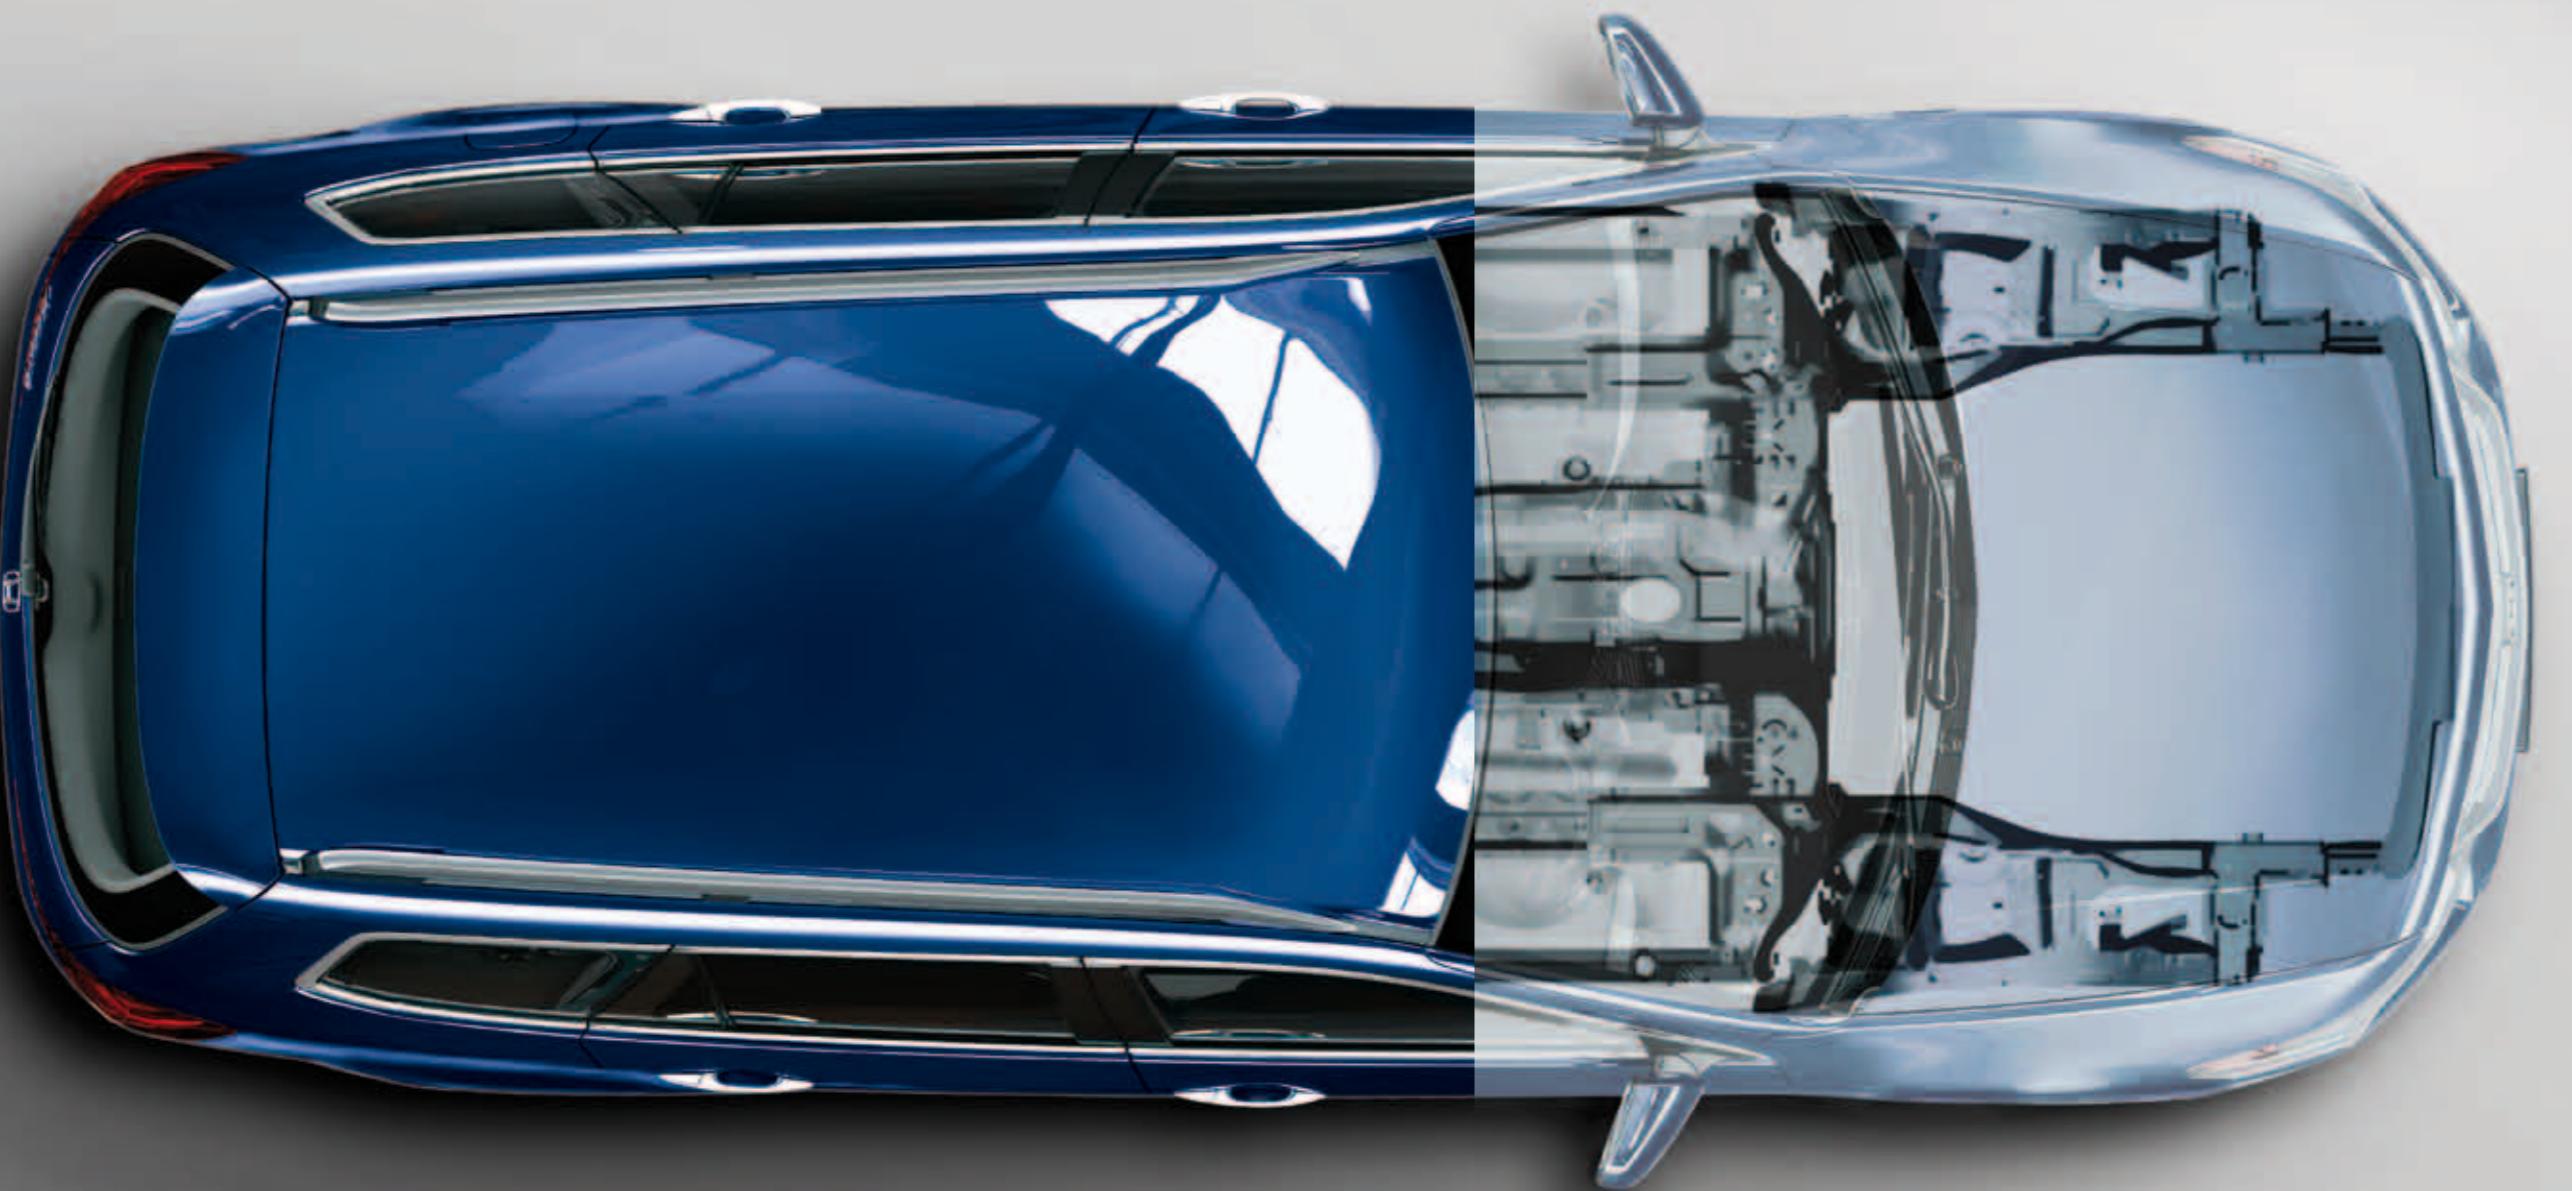

Interior shown is Accord Tourer 2.2 i-DTEC EX

TURNING INTELLIGENT THINKING INTO COMFORTABLE THINKING

Imagine a seat that knows and remembers you. Lumbar supporting front seats are designed to match your body shape and ensure you stay comfortable. The driver's seat* can memorise your favourite driving position and at the touch of a button the memory seat perfectly positions you for your journey. Turn to the rear and you'll find split folding seats offering greater space flexibility. Cabin noise has been greatly reduced through innovations in applying a floating subframe structure with insulated flooring, delivering a smoother, quieter ride. Meanwhile the GPS dual automatic climate control* integrates with your Satellite Navigation to know the position of the sun and set the temperature accordingly – all to ensure your complete comfort.

*Driver memory seat and GPS dual automatic climate control are standard on EX and Type S grades.

Model shown is Accord Tourer 2.2 i-DTEC ES GT

DEVELOPING SAFETY

To ensure we remain at the forefront of safety technology, we built the world's first multi-directional crash test safety facility. The results of rigorous testing and analysis have all been applied to the Accord. The Advanced Compatibility Engineering (ACE) structure of the car is made from 42% high tensile steel, which disperses energy away from those inside. And the high rigidity body forms a stronger protection zone in the event of a collision, protecting you from the force of an impact.

A car with impressive looks and performance should have equally impressive safety features. Large rear brake lights ensure those behind you have clear warning of your actions. Unavoidable impacts trigger a series of safety features to help keep you protected. Front and side airbags are controlled by an intelligent Supplemental Restraint System (SRS) which recognises where the impact has occurred and inflates those airbags required to give you all round protection. We've also thought about who may be sitting in the passenger seat. Airbag deployment can be adapted to give maximum protection for children in a child seat, giving you even more peace of mind.

Three-point Emergency Locking Retractor (ELR) seatbelts with load limiting pre-tensioners tighten to limit body movement. Active head restraints move forward on rear-end impact to support the neck area, reducing whiplash. In addition, safely hidden from view in the rear child seat anchor mount, is a lock to gain access to the boot space in case of emergencies. Simply insert the main ignition key, turn, and the boot will open.

A CAR OF EQUAL PARTS;
POWER AND INTELLIGENCE

The Honda Accord Type S has a potent diesel engine designed to give you more power and a more rewarding driving experience. Our most powerful diesel engine, the 2.2 i-DTEC, delivers 180PS for an exhilarating drive, and as an all aluminium lightweight engine it also delivers impressive fuel consumption and CO₂ emission figures. The Accord Type S is proof that a car can combine performance, economy and refinement in one stunning design.

With its proud stance and impressive looks, the Type S sits together with the ES GT to make up the sportier side of the model line up. Both the Type S Saloon and Tourer have bold 18" alloy wheels and a GT aero kit which adds to the muscular styling of the Accord, to deliver a real road presence and sporty look. Prominent wheel arches and HID wraparound headlights that improve visibility, complete an exterior that reflects the thrilling offering under the bonnet.

The Accord Type S is available in two exclusive paint finishes, Basque Red Pearl and Premium White Pearl, as shown on these two models. It is also available in the classic Milano Red, Polished Metal Metallic and Buran Silver Metallic colours.

Inside, the design focus is on high quality, complete with full black leather upholstery, Satellite Navigation and an integrated Bluetooth® Hands Free Telephone (HFT) system.[■] With a premium interior, a powerful new engine and confident styling, the Accord Type S is a balance of all the qualities you deserve in a car.

TAILOR YOUR DREAMS

Make your mark on your Accord and add some personal finishing touches for comfort, performance and drivability. For a complete overview of all accessories, please contact your local Honda Dealer.

[†] Fuel consumption This test is designed to give an indication of on road fuel consumption. For more information on fuel consumption, please refer to the glossary on page 35.

[△] Figures not available at the time of going to print.

* Maximum towing weights are based on the ability of the car, with two occupants of 75kg each, to restart on a 12% gradient at sea level. At altitudes in excess of 1500 metres, engine output may drop with a reduction in towing capability. Extra weight, such as additional passengers or luggage, should also be deducted from the maximum towing weight.

These specification details do not apply to any particular product which is supplied or offered for sale. The manufacturers reserve the right to vary their specifications, including colours, with or without notice and at such times in such manner as they think fit. Major as well as minor changes may be involved. Every effort, however, is made to ensure the accuracy of the particulars contained in this brochure. This publication shall not constitute in any circumstances whatsoever an offer by the Company to any person. All sales are made by the Distributor or Dealer concerned subject to and with the benefit of the standard Conditions of Sale and Warranty given by the Distributor or Dealer, copies of which may be obtained from them on request. This publicity material applies to the UK only. Trade Descriptions Act (1968). Whilst efforts are made to ensure specification accuracy, brochures are prepared and printed several months in advance of distribution and consequently cannot always immediately reflect either changes in specification or in some isolated cases the provision of a particular feature. Customers are always advised to discuss specification details with the supplying Dealer, especially if your model selection is dependent upon one of the features advertised.

• standard ○ optional - not available

ABS

The Anti-lock Braking System prevents the wheels from locking when the brakes are applied in an emergency, reducing the possibility of a skid on wet, icy or loose surfaces, and enabling the driver to retain steering control.

ADAPTIVE CRUISE CONTROL (ACC)

ACC uses information from a millimetre wave radar mounted inside the front grille to measure the distance to the vehicle ahead, while vehicle speed and yaw rate sensors detect the vehicle's driving parameters. In addition to maintaining a set speed, ACC is also able to automatically regulate both the vehicle speed and its distance to the vehicle ahead travelling in the same lane, thereby reducing the burden of motorway (or similar road) driving and enhancing driver comfort and safety.

ACC only operates if all the following conditions are fully fulfilled:

- the vehicle speed is set from 20mph
- main switch is activated.

BRAKE ASSIST

If you have to make an emergency stop, the system detects the quick pedal action and automatically boosts braking power to reduce the stopping distance.

COLLISION MITIGATION BRAKING SYSTEM (CMBS)

CMBS has been specifically designed to help alert the driver of an impending collision or, if it's unavoidable, to reduce the severity of impact by automatically applying the brakes if a collision is detected. The 'eye' of the system is a radar transmitter mounted behind the Accord's grille. A radar signal is constantly transmitted and the return echo evaluated.

If the system detects a vehicle or obstruction in the road, it determines the distance and closing speed. If the closing speed goes above the threshold, the system immediately alerts the driver with a flashing indicator on the instrument panel and an audible alarm. If the driver takes

no action to reduce speed, the system will automatically tug at the driver's seatbelt and lightly apply the brakes. At the point when the system senses that a frontal collision is inevitable and the driver has still taken no avoidance action, both of the front seatbelts are retracted tightly and strong braking is applied automatically. This automatic action is designed to lower impact speed and help reduce vehicle damage and the severity of personal injury.

CO₂

Carbon dioxide is an exhaust gas believed to be one of the causes of the green house effect. The lower the CO₂ emissions, the better for the environment.

DOUBLE WISHBONE SUSPENSION

This wheel suspension layout provides maximum accuracy in defining the wheel movement during driving. The result is precise and predictable handling of the car as well as reduced body movement during braking and cornering. Double wishbone suspension systems are used in race cars.

ELECTRONIC BRAKE-FORCE DISTRIBUTION (EBD)

EBD works in tandem with ABS, analysing weight distribution around the car and automatically adjusting the braking force applied to front and rear wheels to help maintain directional stability.

ELECTRONIC THROTTLE CONTROL SYSTEM (ETCS or Drive-By-Wire)

The mechanical link from the accelerator pedal to the engine is replaced with sensors that detect the throttle position and feed instructions directly to the engine management system. This provides instant, directly proportional yet smooth responses to throttle inputs.

FUEL CONSUMPTION

The figures for the fuel consumption and CO₂ emissions are to give you an indication of the car's performance. Following legislation by the VCA (Vehicle Certification Agency), all car manufacturers generate these statistics

through the same industry standard test. This allows comparison across all manufacturers and models. The tests use a base grade version of the model and do not take into account optional levels of equipment, such as different sized wheels, tyres and other factors that can affect the economy of the model. The test is on a rolling road and there is no additional weight in the car other than the driver (no passengers or cargo) and it does not account for individual driving style, which can mean a difference to the figures achievable in the real world.

HIGH INTENSITY DISCHARGE (HID)

The sealed HID headlamps, instead of a bulb, contain xenon gas. An electric spark (arc) passing through the gas produces an even, true white light with a higher intensity than conventional halogen units, for improved visibility.

LANE KEEPING ASSIST SYSTEM (LKAS)

LKAS identifies the boundaries of the vehicle's lane by processing images from a C-MOS camera mounted behind the windscreen. It then calculates and provides the optimum steering torque to keep the vehicle in the centre of the lane. A continuous beep sound will be emitted when the vehicle is about to cross the lane markings.

The Lane Keeping Assist System operates when the following conditions are fully fulfilled:

- on roads with left and right boundary markings (where markings are clear and visible)
- on motorways or roads that are equivalent to motorways
- driver has to keep contact with the steering wheel; if the system fails to recognise the driver's input on the steering, it switches itself off
- side indicators are not activated
- steering torque generated by the driver does not indicate imminent lane change manoeuvre.

SATELLITE NAVIGATION SYSTEM WITH VOICE RECOGNITION

The satellite linked, DVD based navigation system delivers turn by turn directions by voice and moving map display all the way to your destination. The DVD also contains points of interest such as service stations if you should require them in an unfamiliar area. The system can recognise over 550 voice commands – including many operations for the audio and climate control systems – so the driver can make adjustments without taking their hands off the steering wheel.

TRAILER STABILITY ASSIST

The Trailer Stability Assist (TSA) system works in conjunction with VSA and has been designed to enhance safety when towing a trailer. Through various sensors, normally attributed just to the vehicle's VSA, TSA will initiate the appropriate brake applications to the wheels which will then stabilise the Accord and trailer.

VEHICLE STABILITY ASSIST (VSA)

VSA helps keep the Accord on course during fast or tight turns by detecting and correcting potential understeer or oversteer. The system continually monitors vehicle speed, throttle position, individual wheel speeds, steering angle, lateral G-force and yaw rate to detect when oversteer or understeer is imminent. When necessary, VSA automatically reduces the engine's torque and uses the ABS system to apply brakes to each wheel, as needed, to help stabilise the vehicle. The response is so quick that the instability may be corrected before the driver even knows it's occurring.

THE POWER OF DREAMS

At Honda we have always strived to develop products that benefit all, and that includes our planet. We believe our development of emission free cars, such as the FCX shown here and reusable energy sources is a challenge we need to undertake to help protect the planet for everyone.

As our founder, Soichiro Honda once said:

"We only have one future, and it will be made of our dreams, if we have the courage to challenge convention."
